

3d hot air balloon

Materials Needed:

colorful construction paper strips (7 in. x ½ in.), crayons, markers, Sharpie or pencil, glue stick, 3 in.(approx.) diameter circle to trace, white drawing paper.

How to do it:

1. Use a Sharpie or pencil to trace a circle in the center of the white paper.
2. Choose 8 strips of paper to form your balloon.
3. Make a ¼ in. fold on both ends of each strip.
4. Glue the strips inside the balloon circle. Start with two strips of the same color. Glue one end on the circle and the next one at a 90° angle (making a cross). Continue by gluing the next color strips in between the two starter strips, making another 90° angle.
5. Continue gluing the strips in this pattern until you have a paper strip balloon.
6. Now use markers/crayons to draw the ropes and the basket of your balloon.
7. Draw and color the rest of your landscape scene any way you'd like. **A landscape shows natural scenery such as mountains, valleys, trees, rivers, and forests.**

How this art relates to Dalí:

Dalí placed a hot air balloon in his pastoral landscape painting *Cadaqués*. If you look closely at the painting, you may notice that the balloon is floating to the left, while the breeze seems to be blowing the trees to the right. Below is the painting *Cadaqués* by Salvador Dalí.
